

The professional App for Model Railroaders

- RailManager Version 2.6
- an intelligent software solution for Smartphone and Tablet
- adaptable to multiple digital command stations
- connected via WiFi or Bluetooth®
- starting from Android V2.3

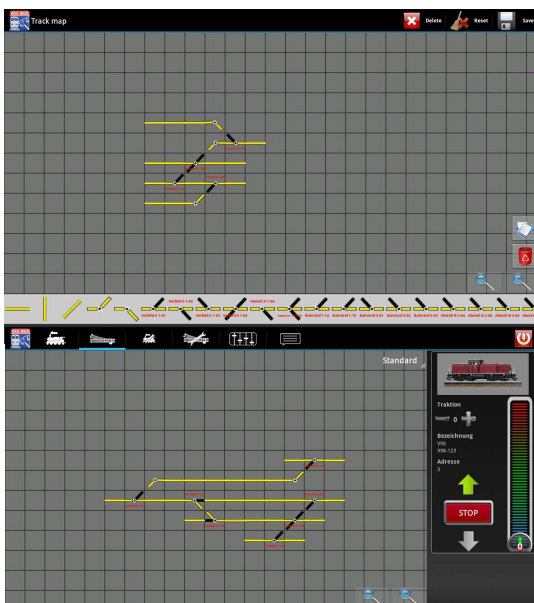

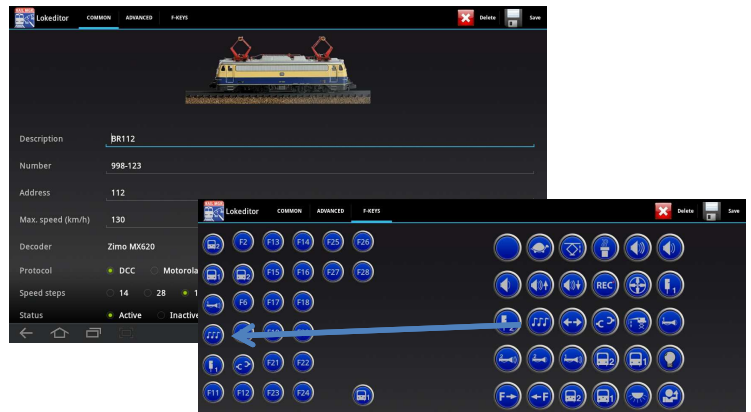

The following functions are offered on the main screen:

- controlling an unlimited number of locs
 - any number of tractions can be allocated to each loc active on the main screen
- turnout control with active loc control
- vehicle administration including picture data bank
 - vehicle data
 - function keys administration
- turnout administration
 - track plan for a number of model railways
- CV-administration
 - for all ZIMO-products
- configuration of the connection between command station and RailManager

Data bank features:

- All data with regard to locs and waggons can be entered and categorized
- The CVs are grouped in categories giving full text information
- central vehicle administration
- saving data specific to vehicles
- differentiating between active and inactive locs
- flexible expansion and adaptation of data base
- function keys administration
- allocating symbols by drag and drop

Turnout and accessories decoder administration

- drafting track plans of basic or complex structure
- easy positioning of conception elements
- all individual track plans can be saved, named and restored

Turnout control with active loc control

- ideal screen for
- controlling a loc in shunting operation
- or accompanying a loc on its route, switching turnouts and making use of the function keys

innovative – flexibly adaptable – wireless – future-compliant
